LENGTHS: 4400-6200 MM IN 100
MM STEPS

FLOOR: 4-6 MM HB500

FRONTWALL EXTENSION: 4 MM
DM650

FLAP SYSTEM: K30 ALUMINIUM

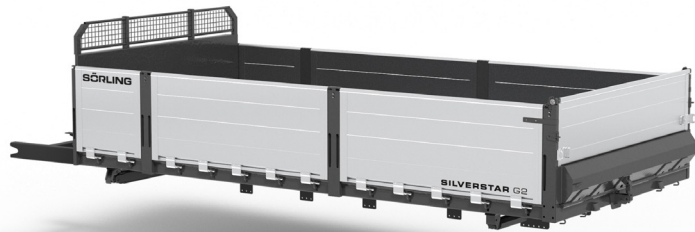

OPTIMISED FOR EFFICIENCY

Our Silverstar tipping trailer has a unique, self-supporting trailer floor and collapsible aluminium sides, ensuring low weight and increased payload capacity in combination with high level stability and durability.

The low build height not only optimises the centre of gravity, but gives you a comfortable working height. And there are numerous optional extras – such as internal reinforcements, both on the drop sides and tailgate to extend the lifespan when carrying mixed materials – ensuring you can adapt your Silverstar to handle the challenges you face.

We also build the Silverstar tipping trailer as a trailer vehicle on our own chassis – perfect if you want a complete rig with good load capacity and stability.
