SIDE HEIGHT 950-1200 MM

FLOOR 5-10 MM HB500

SIDES 4-8 MM HB450

SAF

SINGLE MOUNTED

3 AXLES

A STRONG AND VERSATILE LIGHTWEIGHT TRAILER

Our trailer is designed with weight optimisation in mind, delivering the lightest possible weight without compromising strength or quality. The sturdy and strong construction gives the trailer a high load capacity, which means bigger payloads and more efficient work. High ground clearance and separate axle lifts makes the trailer easy to operate, even in tougher conditions. To make the chassis fully customisable, we offer a number of optional add-ons, including single and double mounting and a metallized chassis for ultimate rust protection. To put it plainly, our trailer is a powerful lightweight with big potential.

Together with the Multistar G2 dumper, you get a trailer that meets all your needs, designed and manufactured with durability and quality in mind.

- | | | | |
|----------|---|----------|---|
| 1 | Sturdy trailer with low weight and high load capacity. | 2 | Straight internal edges to maximise internal width. |
