FLEXIBLE TRAILER WITH SUPERIOR STRENGTH

Our semitrailer is designed and manufactured to be the perfect partner to the Opal dumper bucket. With the floor's half pipe construction, the trailer delivers superior strength without the need for reinforcements – resulting in a lighter trailer. The optimised chassis means the trailer has a high load capacity, while still ensuring easy operation. Add on a double-acting tipping cylinder with quick lowering for faster cycle times and we have designed a semitrailer that makes your job easier – a partner through thick and thin.

- 1** Versatile semitrailer with a high load capacity.
- 2** Sliding axle assembly with mechanical lock and sensor for tip locking .
- 3** Stainless steel taillight holder.
- 4** Tipping cylinder with quick lowering valve .
