SAF

3 OR 2 AXLES

A STRONG AND VERSATILE LIGHT- WEIGHT TRAILER

Our trailer is designed with weight optimization in mind, delivering the lightest possible weight without compromising strength or quality. The sturdy and strong design gives the trailer a high load capacity, which means bigger payloads and more efficient work. High ground clearance and separate axle lifts makes the trailer easy to operate, even in tougher conditions. To make the chassis fully customisable, we offer a number of optional add-ons, including single and double mounting and a metallized chassis for ultimate rust protection. To put it plainly, our trailer is a powerful lightweight with big potential.

Together with the Silverstar G2 platform, you get a trailer that meets all your needs, designed and manufactured with durability and quality in mind.
